

git 双帐号配置

<https://www.cnblogs.com/BeginMan/p/3548139.html>

1、生成帐号

#新建SSH key:

```
$ cd ~/.ssh      # 切换到C:\Users\Administrator\.ssh
```

```
ssh-keygen -t rsa -C "mywork@email.com" # 新建工作的SSH key
```

```
# 设置名称为id_rsa_personal
```

```
Enter file in which to save the key (/c/Users/Administrator/.ssh/id_rsa):
```

```
id_rsa_personal
```

2、新密钥添加到SSH agent中

因为默认只读取id_rsa，为了让SSH识别新的私钥，需将其添加到SSH agent中：

```
ssh-add ~/.ssh/id_rsa_personal
```

如果出现Could not open a connection to your authentication agent的错误，就试着用以下命令：

```
ssh-agent bash
```

```
ssh-add ~/.ssh/id_rsa_personal
```

3、修改config文件

在~/.ssh目录下找到config文件，如果没有就创建：

```
Host github.com
```

```
HostName github.com
```

```
User liuzhiwe7829
```

```
IdentityFile C:\\Users\\zhiwei.liu003\\.ssh\\id_rsa_personal
```

```
Host china-cri.com
```

```
HostName china-cri.com
```

```
IdentityFile C:\\Users\\zhiwei.liu003\\.ssh\\id_rsa
```

```
User zhiwei.liu003
```

基本操作

```
git clone url 克隆
```

```
git status 查看本地分支文件信息，确保更新时不产生冲突
```

```
git checkout -b
```

```
git branch (查看当前分支情况)
```

git 分支切换

<https://www.cnblogs.com/smiler/p/6924583.html>

git commit 与 pull区别

https://blog.csdn.net/xiaosi_xiaosi/article/details/81336077

gitlab 新建项目

Command line instructions

Git global setup

```
git config --global user.name "刘志伟"
```

```
git config --global user.email "zhiwei.liu003@china-cri.com"
```

Create a new repository

```
git clone git@192.168.26.51:chinacri-b2b/chinacri-b2b-gateway.git
```

```
cd chinacri-b2b-web
```

```
touch README.md
```

```
git add README.md
```

```
git commit -m "add README"
```

```
git push -u origin master
```

Existing folder

```
cd existing_folder
```

```
git init
```

```
git remote add origin git@192.168.26.51:chinacri-b2b/chinacri-b2b-gateway.git
```

```
git remote add origin git@192.168.26.51:chinacri-b2b/chinacri-b2b-admin.git
```

```
git remote add origin git@192.168.26.51:chinacri-b2b/chinacri-b2b-car.git
```

```
git remote add origin git@192.168.26.51:chinacri-b2b/chinacri-b2b-web.git
```

```
git add .
```

```
git commit -m "Initial commit"
```

```
git push -u origin master
```

Existing Git repository

```
cd existing_repo
git remote rename origin old-origin
git remote add origin git@192.168.26.51:chinacri-b2b/chinacri-b2b-
web.git
git push -u origin --all
git push -u origin --tags
```

1. 查看远程分支

```
$ git branch -a
```

我在mxnet根目录下运行以上命令：

```
~/mxnet$ git branch -a
* master
remotes/origin/HEAD -> origin/master
remotes/origin/master
remotes/origin/nvvm
remotes/origin/piiswrong-patch-1
remotes/origin/v0.9rc1
```

可以看到，我们现在在master分支下

2. 查看本地分支

```
~/mxnet$ git branch
* master
```

3. 切换分支

```
$ git checkout -b v0.9rc1 origin/v0.9rc1
Branch v0.9rc1 set up to track remote branch v0.9rc1 from origin.
Switched to a new branch 'v0.9rc1'
```

已经切换到v0.9rc1分支了

```
$ git branch
master
* v0.9rc1
```

切换回master分支

```
$ git checkout master
```

```
Switched to branch 'master'
```

```
Your branch is up-to-date with 'origin/master'.
```

合并

<https://blog.csdn.net/boysky0015/article/details/78185879/>

```
git remote add origin https://github.com/leevongbard/learngit.git
```

```
git branch -v
```

```
git remote -v
```

```
git clone url 检出代码 Shift+Insert 快捷复制
```

```
git branch -a 查看本地版本
```

```
git checkout 版本 ---确保同develop代码一直
```

```
git pull 同步代码
```

```
git add . 添加提交代码
```

```
git commit -m "modify" 提交本地
```

```
git push 提交代码到分支
```

```
git branch --set-upstream-to=origin/develop develop
```

```
git commit -"modify"
```

还原

```
git checkout -- filename
```

```
git reset --filename
```

```
git reset --hard origin/master https://www.jianshu.com/p/fb5a271d2cc0
```

```
git clean -df
```

```
git remote add origin git@192.168.26.51:chinacri-b2b/chinacri-b2b-web.git
```

差异比较

```
git diff version version
```

合并到master

git pull origin master

git merge develop

回退版本

git reset xxxx

git push -f

删除分支

删除远程分支

git push origin --delete xxx

删除本地分支

git branch -d xxx

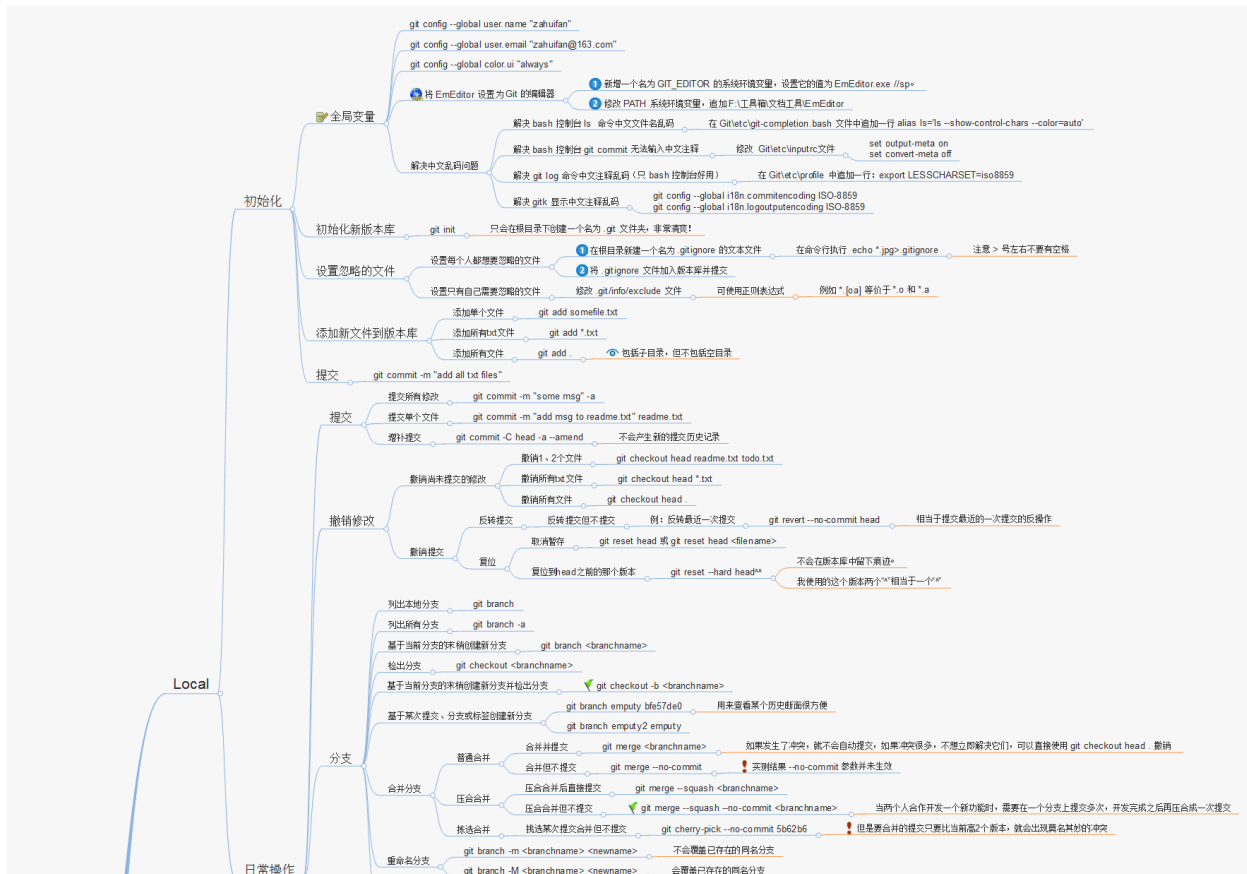

问题处理

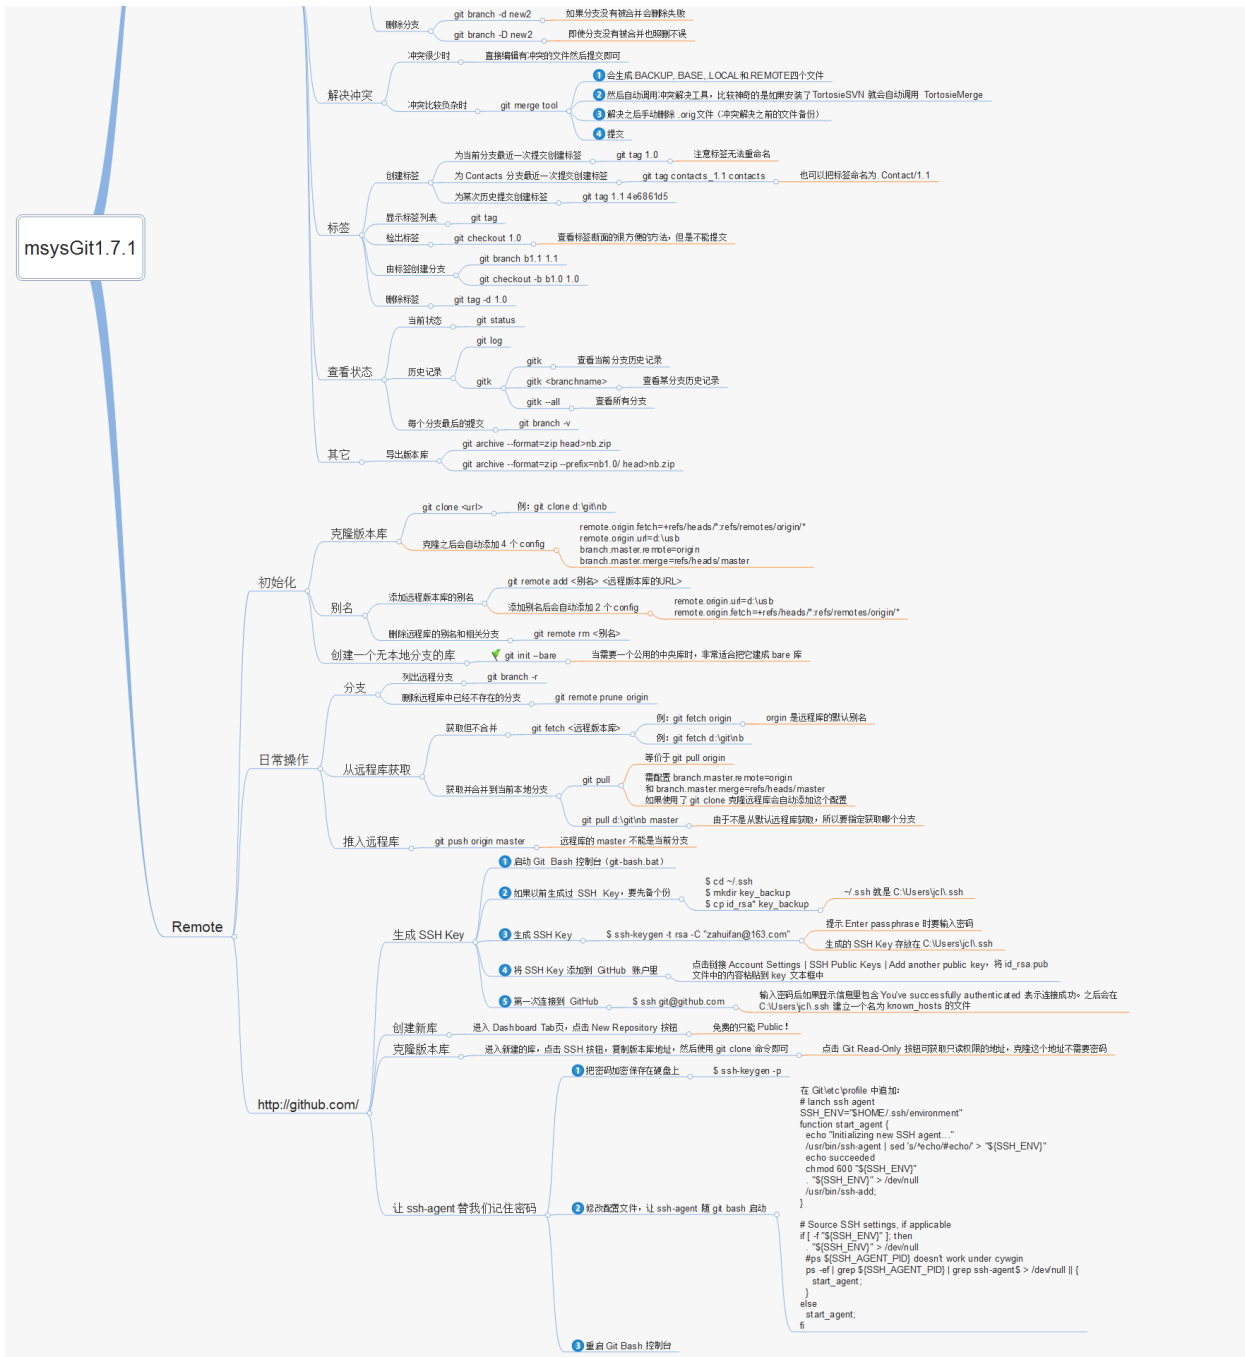

1、Filename too long

git config --global core.longpaths true

2、github代码下载慢

- DNS解析 <http://tool.chinaz.com/dns/>
- C:\Windows\System32\drivers\etc\hosts
- 13.250.177.223 github.com

. ssh

config
375B

git.txt
1013B

id_rsa
1.63KB

id_rsa.pub
409B

id_rsa_personal
1.63KB

id_rsa_personal.pub
398B

id_rsa_sl
3.16KB

id_rsa_sl.pub
